5M Mileage Boost Systems  
Plot No: 18, Vijai Nagar , Wellington Road,  
Secunderabad, Pin: 500 026, Telangana, India  
Mob. +91 9949749722, +91 7780769151,  
Email. more.kmpl@gmail.com

Suitable for  
**Petrol  
Diesel  
LPG  
& CNG** engines

Very Safe for engine, prolongs engine life

**YouTube** : 5M Engine boost

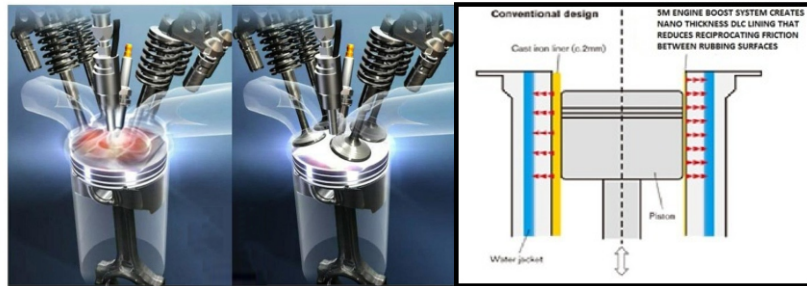

More Mileage

More Pickup

More Smoothness

More Torque & Engine Life

More Pollution control

## 5M - What is it?

5M Mileage Boost is an advanced system in which plasma and ultrasonic waves are injected inside the engine in a controlled manner to give actual positive effect to the vehicle. In this process the plasma gas is injected through the inlet manifold of the engine and after the completion of process it goes out through the exhaust system in the form of a natural gas. 5M is 100% an environmental friendly technology.

## 5M - How does it work?

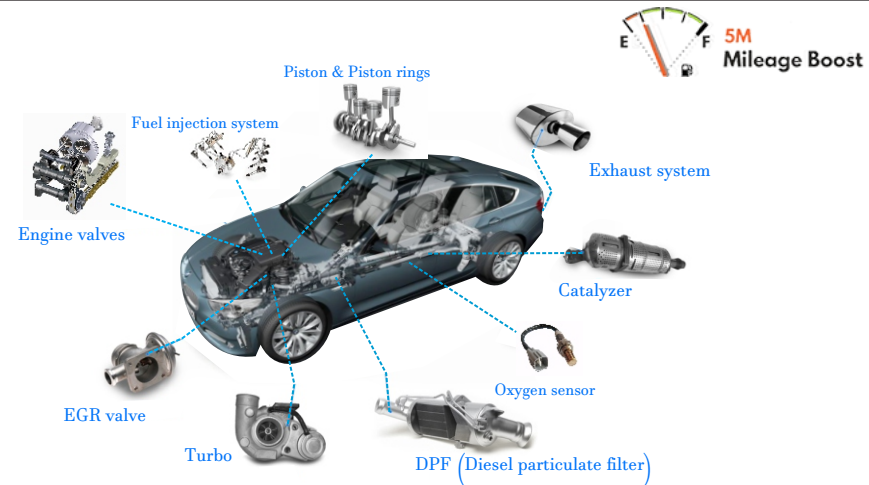

When plasma is injected inside the engine along with ultrasonic waves they start to destabilize the un-burnt hydro carbons (UHC'S). At the same time plasma ignites inside the engine with high implosive energy and it targets these free radical carbon particles and raises their temperature to the highest point and brings the combustion efficiency to the highest energy level.

Due to this high combustion heat, high cylinder pressure and plasma converts all free radical carbon particles into diamond like carbon (DLC) Linings. This thin layer of DLC coating makes the reciprocating surface very slippery and reduces reciprocal friction to a great extent.

This DLC coating makes engine more responsive and that gives results such as more power, more pickup, quieter and smoother engine, more torque, more engine life and more pollution control

5M is a quick, simple and safe process which works efficiently on all types of engines using different fuels such as Petrol, Diesel, LPG, CNG etc.

5M does not requires opening and messing-up engine parts. It does not usedangerous chemical products, so it is not harmful to the environment aswell as the engine.

## 5M- Benefits

### Improves fuel efficiency, saves money:

5M Mileage Boost System creates a DLC coating to make reciprocating action smoother inside the engine, this aspect helps to improve the engine functions greatly and helps the fuel efficiency of the vehicles to increase. It means your car can travel more distance on same fuel input. More MPG or more KMPL, i.e. lower fuel bills.

### Lower emissions, saves environment:

5M Mileage Boost Service when periodically done on vehicles can significantly reduces harmful exhaust emissions and can easily help vehicles to achieve emission levels closer to BS4 standards.

### Avoid costly repair bills on maintenance:

Hard Carbon deposits and friction build ups inside engines leads to potentially expensive issues by way of replacing engine parts such as fuel injectors, inlet manifold, DPF (Diesel Particulate Filter), EGR valve (Exhaust Gas Recirculation System), Turbo charger, Catalytic converter, O2 sensor etc. All these components can be revived and made to work better with use of only one 5M mileage boost service which is not expensive and results in to saving of considerable amount.

5M is recommended to be adapted as a VALUE ADDED SERVICE to all vehicle maintenance schedules on a regular basis once in every 25,000 km.

### 5M comes with a 10,000 km performance warranty.
